DETAILED ACTION

Allowable Subject Matter

1. **Renumbered claims 1-28** are allowed (e.g., original claims 1, 4-29, 31 and 32).

Original claims 2, 3, 30 and 31 have been canceled (see paper no. 25).

2. The following is an examiner's statement of reasons for allowance:

As per independent claims 1, 9, 13, 19, 22 and 25, the cited prior art fails to explicitly teach of a computer-implemented method for training a neural network to provide an aesthetic determination of images, wherein an image and the corresponding aesthetic value is used as inputs to train the neural net; an aesthetic score is generated and outputted by the trained neural network based upon the image and related input values; and a recommendation to improve the aesthetic score for the image is provided based upon a gradient ascent.

Burges, U.S. Patent No. 6,112,195, teaches of using a support vector machine (SVM) to recognize, map and translate variances within input images respective of predetermined stored database images, but fails to focus on generating an aesthetic score for each image, and providing a recommendation to improving the score.

Jagielski, "*An Application of Neural Networks to Emulation of Aesthetic Judgments*", and Yasuda et al., "*Aesthetic Design System of Structures Using Neural Network and Image Database*", teach of using input images and structural design criteria to train neural networks to recognize images and structural characteristics, respectively,

whereby the trained system is then used to classify images based upon predetermined aesthetic preferences. However, the references fail to focus on generating an aesthetic score for each image, wherein a recommendation is later provided for improving an image or design score.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
